1.	Fill in the blank: Comparators are operators that compare two values and produce values.	1/1 point
	string	
	O integer	
	↑ float	
	boolean	
	-	
	Correct Comparators are operators that compare two values and produce boolean values. Boolean is a data type that has only two possible values, usually true or false.	
2.	When comparing two expressions, what logical operator requires both expressions to be true to return a <b>True</b>	1/1 maint
-	result?	1/1 point
	(a) and	
	O not	
	O with	
	O or	
	<ul> <li>Correct         When comparing two expressions, the and logical operator requires both expressions to be true to return a True result. Logical operators can connect multiple statements and perform complex comparisons.     </li> </ul>	
3.	Which of the following is a reserved keyword that sets up a condition in Python?	1/1 point
	O else	
	O with	
	O as	
	① if	
	<ul><li>✓ Correct</li><li>if is a reserved keyword that sets up a condition in Python.</li></ul>	
4.	The elif keyword only works when there are exactly two possible conditions in the code.	1/1 point
		1/1 point
	O True	
	False	
	○ Correct The elif keyword allows for more than two possible conditions in the code—up to an unlimited number of comparison cases.
