1.	In regression modeling, which statement describes the PACE plan stage?	1/1 point
	Understanding the data in the context of a problem	
	O Building the regression model in a coding language	
	Examining data more closely to choose an appropriate model	
	O Preparing formal results and visualizations for stakeholders	
	Correct In regression modeling, understanding the data in the context of a problem describes the PACE plan stage. During the plan stage, a data professional considers what data they have access to, how the data was collected, and what the business needs are.	
2.	In which PACE stage does a data professional initially check the model assumptions?	1/1 point
	C Execute	
	Analyze	
	○ Construct	
	O Plan	
	 Correct During the analyze stage, a data professional initially checks the model assumptions. 	
3.	What three tasks typically occur during the PACE construct stage? Select all that apply.	1/1 point
	✓ Evaluate the model results	
	 Correct A data professional builds the model, rechecks and confirms model assumptions, and evaluates results in the construct stage. 	
	Present the visualizations to stakeholders	
	Re-check and confirm the model assumptions	
	 Correct A data professional builds the model, rechecks and confirms model assumptions, and evaluates results in the construct stage. 	
	✓ Build the model	
	 Correct A data professional builds the model, rechecks and confirms model assumptions, and evaluates results in the construct stage.
